

4 Brief Use cases

Declaring the Winner:

1. If all the players have finished all their rolls, the system must declare the winner who has the highest points. If two players have the same score, the system will declare it as a draw.
2. The system will declare the winner as **“Player 1 WON”**.
3. The player rankings will be displayed in descending order based on their points. The player with the highest points will be listed at the top, while the player with the lowest points will be placed at the bottom.
4. The rankings will include the player number and specify whether the player is AI.

Quit the Game:

1. If a single player wants to quit in the middle of the game, they must press the **“Quit Game”** button.
2. The system will ask the player, **“Are you sure you want to quit the game, Player #?”**
3. If the player selects **“Yes”**, the system will count the points the player has accumulated up to that moment.
4. The game will continue as normal, skipping the turn of the player who has quit.

Load Game:

1. The player selects the "**Load Game**" option from the welcome screen.
2. The system displays a list of available saved game files.
3. The player chooses a specific save file to load.
4. The system retrieves the selected save file and loads the game state.
5. The game resumes from the saved state.

Save Game:

1. The player selects the "**Save Game**" option from the menu.
2. The system prompts the player to enter the name of the game they want to save.
3. The player enters the name and selects "**Save**".
4. The system captures the current game state, including player progress and other relevant data.
5. The system confirms that the save was successful.
6. The system takes the player back to the home screen.
