

Taking a Turn

Primary Actor: Player

Stakeholders and Interests:

- *Current Player:* wants to be able to clearly see whose turn it is, take a legal turn, and for all legal actions to be clear, such as how many re-rolls are remaining and which tiles the current player can place a stone with their current roll.
- *Other Players:* want it to be clear when it isn't their turn, and to be able to clearly see the outcome of the current player's turn.

Preconditions:

- The game is currently being played
- There are 2 - 4 players

Success Guarantee:

- The player taking their turn is aware of all possible actions they can make and is aware when they have taken their turn and what the outcome of it was.

Main Success Scenario:

1. The system displays a screen(dice roll screen) that shows that it is a certain player's turn and gives them the option to roll all 6 dice.
2. The player chooses the option to roll all their dice
3. The system provides the player with 6 randomly generated dice values.
4. The player rolled a playable turn and decides to use it for their turn and not reroll their dice and choose continue [*Alt 1: Player chooses to reroll their dice*]
5. The system takes the player to a different screen(board screen) where the board is displayed.
6. The player chooses a legal move, clicks the corresponding tile, and confirms their choice. [*Alt 2: Player tries to take an illegal move*]
7. The system displays the players stone on the chosen tile and resets the turn interface for the next player [*Alt 3: It is the last turn*]
8. The next player chooses the next roll option [*Use case ends*]

Alternative Flows:

Alt 1: Player chooses to reroll their dice

1. The player chooses which dice they are going to reroll by clicking them
2. The player clicks a reroll button in the game interface
3. The system displays the newly rolled dice.
4. The player can choose to reroll again, if not, Flow resumes at Main Success Scenario Step 4.

Alt 2: Player tries to take an illegal move

1. The system does not allow the player to select an illegal tile and displays text saying that the attempted move is not valid. Flow resumes at Main Success Scenario Step 6

Alt 3: It is the last turn

1. The system will end the game and move the player to a game over screen declaring a winner and displaying the scores of all players. Use case ends

Exceptions:

- If the player cannot roll a playable hand during their turn, they pass their turn and the game continues to the next player

Special Requirements:

- The colored game tiles and game interface text should have accessibility options or already be accessible for the visually impaired(e.g. color blindness)

Open Issues:

- If a turn is already taken, then the system will not allow the user to redo that turn.
