

Set Up A Game

Primary Actor: Player

Stakeholders and Interests:

- *Player:* Wants to set up a new game and play with other players/AI.
- *Color Vision Deficient Players:* Can set up a board that caters to their color visual deficiency.
- *Parents:* Can monitor and make sure the system is suitable for children.

Preconditions:

- The System is running and accessible
- There are 2 - 4 players
- Previously saved games are available to play

Success Guarantee:

- The player is aware of all possible actions they can make and is aware of the rules of the game.

Main Success Scenario:

1. The System gives the user the option to pick "New Game" or "Load game"
2. The player selects "New Game". [*Alt 1: Player chooses "Load game"*]
3. The system provides the player with all the options to set up a new game, including the number of players (human or AI), AI difficulty, Color options.

4. The player chooses how many players there are and how many are human. [*Alt 2: Player chooses AI players*]
5. The player chooses which color settings to play in.
6. The system provides the user with information on the game, i.e. the number of players, AI players, difficulty levels etc.
7. The user then clicks on the start button. [*Alt 3: Something is not selected properly*]
8. The system sets up the board to the user's specifications and starts the game.
[*Use case ends*]

Alternative Flows:

Alt 1: Player chooses "Load Game"

1. The player chooses the Load Game option.
2. The system shows the player all the saved games.
3. The player selects the game they want to continue. Flow resumes at Main Success Scenario Step 8.

Alt 2: Player chooses AI players

1. The system asks the player for the difficulty level of AI players.
2. The player picks Easy or Hard difficulty. Flow resumes at Main Success Scenario Step 5.

Alt 3: Something is not selected properly

1. The System tells the user what is not selected properly.
2. The player can now reselect and solve the issue. Flow resumes at Main Success Scenario Step 7.

Exceptions:

- If at any point the system is unable to continue with the setup of the game, then the system informs the user of the problem and exits to the main menu.

Special Requirements:

- The game must support 2-4 players
- The computer player must have two settings (Easy/Hard).
- The user should be able to save the game and return later.
- The System should provide color vision deficiency-friendly settings.

Open Issues:

- Loaded games need to be saved to be continued later.
