

Use Case: Choose Game Settings

Primary Actor: Player

Stakeholders and Interests:

- Current Player: Wants to configure the number of human and AI players, set AI difficulty, and select a world before starting the game.

Preconditions:

- The game is on the settings screen before a new game starts.
- The player has access to the settings UI.

Success Guarantee:

- The game settings are configured correctly before starting the game.
- The player is aware of the selected settings (number of players, AI difficulty, world selection).

Main Success Scenario:

1. The system displays the Game Settings Screen with options to configure players, AI difficulty, and world selection.
2. The user selects the type for each available player slot (Human/None). [*Alt 1: Player Selects an AI Player Type*]
3. The player selects a World from the available options.
4. The system updates the real-time summary showing the number of human and AI players and the selected world.
5. The player chooses to start the game. [*Alt 2: Player Does Not Select Another Player Type*]
6. The system validates the selections and starts the game.[*Use case ends*]

Alternative Flows:

Alt 1: Player Selects an AI Player Type

1. The user selects the type for each available player slot and chooses one or more AI Player type.
2. The user selects the difficulty level for each AI Player (Easy/Hard). Flow resumes at Main Success Scenario Step 3

Alt 2: Player Does Not Select Another Player Type

1. The player chooses to start the game.
2. As no other player is selected, the system displays an error message prompting the player to choose at least one more player type.
3. The user selects the type for each available player slot (Human/None). Flow resumes at Main Success Scenario Step 5

Exceptions:

If the system encounters an issue (e.g., missing data or invalid selections), an error message is displayed, and the player must correct it before proceeding.

Special Requirements:

The settings UI should be accessible, including colorblind-friendly options and clear text instructions. The dropdown selections should be interactive and visually indicate selected choices.
