

Rolling a Dice

Primary Actor: Player

Stakeholders and Interests:

- *Current Player:* wants to be able to clearly see their currently rolled dice, how many re-rolls are remaining, and which dice they have selected to be rerolled.

Preconditions:

- The game is currently being played
- It's the start of the current players turn

Success Guarantee:

- The player taking their turn is aware of all possible actions they can make and is aware of how many rerolls they have left.

Main Success Scenario:

1. The system displays a screen(dice roll screen) that shows that it is a certain player's turn and gives them the option to roll all 6 dice.
2. The player chooses the option to roll all their dice
3. The system provides the player with 6 randomly generated dice values.
4. The player rolled a playable turn and decides to use it for their turn and not reroll their dice and choose continue [*Alt 1: Player chooses to reroll their dice*]
5. The system takes the player to a different screen(board screen) where the board is displayed and continues their turn.[*Use case ends*]

Alternative Flows:

Alt 1: Player chooses to reroll their dice

1. The player chooses which dice they are going to reroll by clicking them
2. The system highlights the players selected dice
3. The player clicks a reroll button in the game interface to reroll the selected dice
4. The system displays the newly rolled dice
5. If there are rerolls left, the player can choose to select and reroll any dice until they are out of rerolls. If not, Flow resumes at Main Success Scenario Step 5

Exceptions:

- If the player cannot roll a playable hand during their turn, they pass their turn and the game continues to the next player

Special Requirements:

- The Dice Roll screen interface and text should have accessibility options or already be accessible for the visually impaired(e.g. color blindness)
