

Choosing Color Deficiency Settings - USE CASE SCENARIO

Choosing Color Deficiency Settings

Primary Actor: Player

Stakeholders and Interests:

- **Player:** Wants to adjust the game's visuals to suit their color preferences.

Preconditions:

- The game is running.
- The player has access to **Settings**.(Red,Blue,Green)

Success Guarantee:

- The selected color setting is applied and saved.

Main Success Scenario:

1. The player navigates to **Settings**.
2. The system displays **Color Settings** with multiple options.
3. The player selects a color setting.
4. The system applies and saves the selection.

Alternative Flows:

Alt 1: Default World Selection

1. The system presents the **World Selection** screen.
2. The player does not select a specific world.
3. The system assigns the **default world**.

Exceptions:

- If the player exits without selecting, previous settings remain unchanged.

Special Requirements:

- The setting should persist across sessions.
