

About This Project & Documentation

This repository contains an academic coursework project that was developed incrementally over four iterations by me and my other teammates. For each iteration, I have included the related design and analysis documents (such as requirements, domain models, sequence diagrams, and other artefacts), along with the communications log and plan for the next iteration.

Because the project evolved over time, some of the final implementation differs from what is described in the earlier documents. These mismatches are intentional to keep a record of how the design changed across iterations and to satisfy course requirements. If there is a conflict between a document and the code, the **final source code uploaded** should be considered the authoritative version of the system's behavior.

*****IMPORTANT NOTICE: THIS IS AN ACADEMIC PROJECT FOR COURSEWORK/ASSIGNMENT USE ONLY. THE CODE AND DOCUMENTS ARE PROVIDED SOLELY FOR EDUCATIONAL DEMONSTRATION AND IS NOT AUTHORIZED FOR COMMERCIAL OR PRODUCTION USE.*****
